

ORAL PEPTIDE
DIHEXA

Description:

Dihexa is a peptide known for its potential to enhance synapse formation and support cognitive function. It was developed to address neurodegenerative conditions and shows promise in improving memory, learning, and overall brain health.

Benefit:

May improve memory, focus, and cognitive performance.

Side Effects:

It is important that you follow the dose and administration instructions as listed. Research on Dihexa in humans is limited, but possible side effects may include headaches, anxiety, irritability, or fatigue. If any of these symptoms become severe, contact us and let the medical team know.
