

ORAL PEPTIDE
ORFORGLIPRON
(GLP-1 RECEPTOR AGONIST)

Description:

Orforglipron is an oral GLP-1 receptor agonist designed to mimic the natural hormone GLP-1, which regulates appetite, glucose levels, and metabolism. Unlike injectable GLP-1 medications, orforglipron is taken by mouth, making it a convenient option for supporting weight management and metabolic health.

Benefit:

Supports weight loss and healthy blood sugar control in a convenient oral form.

Side Effects:

It is important that you follow the dose and administration instructions as listed. Common side effects may include nausea, diarrhea, constipation, abdominal pain, and decreased appetite. Some individuals may also experience fatigue, headache, or dizziness. These symptoms are typically mild and improve with continued use. If any of these symptoms become severe, contact us and let the medical team know.
