

PEPTIDE NASAL SPRAY

SUPER SEXY SPRAY
OXYTOCIN - PT-141

Description:

Oxytocin is a naturally occurring hormone often called the “bonding” or “love hormone.” As a nasal spray, it may support social bonding, emotional connection, mood balance, and stress reduction.

PT-141 (Bremelanotide) is a peptide derived from melanocortin that primarily enhances sexual arousal and libido. Unlike other treatments, it works on the brain’s arousal pathways rather than blood flow, making it effective for both men and women.

Benefit:

Improved mood, reduced stress, enhanced intimacy, stronger emotional connection, and increased sexual desire/arousal.

Side Effects:

It is important that you follow the dose and administration instructions as listed. possible side effects may include mild nasal irritation, flushing, headache, changes in heart rate, or temporary fatigue. If any of these symptoms become severe, contact us and let the medical team know.
