

PEPTIDE PT-141

Description:

PT-141 (also called bremelanotide) is a peptide that works on the brain's pathways to help increase sexual desire and arousal. Unlike other therapies that affect blood flow, PT-141 works on the nervous system, which means it can be effective for both men and women in improving libido and sexual satisfaction.

Benefit:

Improves sexual desire and arousal, enhances satisfaction, and supports sexual wellness for both men and women.

*Discontinue concurrent use of PDE-5 medications (Viagra, Cialis, etc.)

Side Effects:

It is important that you follow the dose and administration instructions as listed. You may experience site injection reactions, flushing or warmth, nausea or mild upset stomach, headache, and mild increase in blood pressure. These are normal symptoms. If any of these symptoms become severe, contact us and let the medical team know.

IMPORTANT

1-2x / week as needed

60-90 minutes before Intercourse.

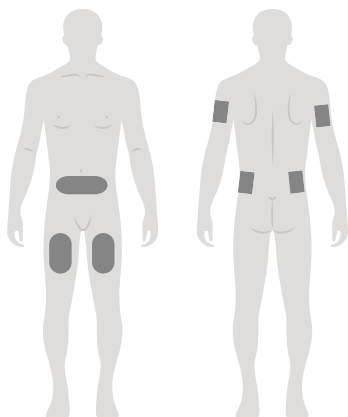

2 days / Week Max

Inject 10-20 units SQ (Always start with 10, 15, then 20. Only do 20 if you do not feel the effects)

Refrigerate

Injection Site:

Use an alcohol swab on the top of the vial and at the site of injection before use. Work in a clockwise fashion around the belly button to ensure the prior injection sites have healed, avoiding tender areas. Other subcutaneous area shown to the left.
