

PEPTIDE TESAMORELIN

Description:

Tesamorelin stimulates the pituitary gland to release growth hormone (GH), which then boosts IGF-1 production. This chain reaction helps support muscle growth, recovery, and metabolism—while specifically targeting and reducing visceral fat around the organs.

Benefits:

Reduces visceral belly fat, supports muscle growth and recovery, improves body composition, and boosts metabolism for healthy aging.

Side Effects:

It's important to follow the dose & administration instructions as listed. Mild injection site reactions, joint pain, or water retention may occur. Some experience temporary nausea, headaches, or changes in blood sugar levels. These effects are generally mild & improve as your body adjusts. If any symptom becomes severe, contact us and let the medical team know.

IMPORTANT

3 Months on 1 Month OFF

PM (90 minutes after eating for optimal results, close to bedtime)

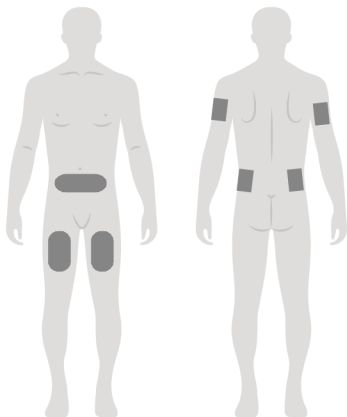

5 days on 2 days off

Inject 20 units SQ

Refrigerate

Injection Site:

Use an alcohol swab on the top of the vial and at the site of injection before use. Work in a clockwise fashion around the belly button to ensure the prior injection sites have healed, avoiding tender areas. Other subcutaneous area shown to the left.
